

# Further Modelling

Dr. Seb Funk

Dr. Katie Atkins

Which languages?  
... and why?

# This session you will...

Discuss:

- **Any questions you have about modelling software**

Think about:

- How do you choose your language for modelling?
- How do you find help when modelling?
- How do you tell people about your code and work with others?

- Using  : examples from modelling
- What are the next steps?

# How do you chose your language for modelling?

Is it free?

YES (R, Python, C/C++, BEAST XML, Java, Perl)

NO (Matlab, STATA, SAS, Berkeley Madonna, Excel)

Can other people read and use my code (is it 'portable')?

GENERALLY YES (R, Python, C/C++, BEAST XML, Java, Perl)

-ISH (Matlab...)

NOT REALLY (Berkeley Madonna, Excel)

Is it popular in my field (modelling)?

YES (R, Python, C/C++, Matlab)

NO (STATA, SAS, Excel)

Is it easy to learn, easy to use, intuitive, and logical?

... depends on what you like / what you've seen ...

... are there multiple ways of doing the same thing / how readable is the code?

Does it have the correct tools for my work?

In principle "YES" for any "Complete" language

But easier if there are 'packages' or 'functions' that are written for you already!

**#1 programming rule: Don't reinvent the wheel**

# Readability

```
#include "stdio.h"
#define e 3
#define g (e/e)
#define h ((g+e)/2)
#define f (e-g-h)
#define j (e*e-g)
#define k (j-h)
#define l(x) tab2[x]/h
#define m(n,a) ((n&(a))==a))

long tab1[]={ 989L,5L,26L,0L,88319L,123L,0L,9367L };
int tab2[]={ 4,6,10,14,22,26,34,38,46,58,62,74,82,86 };

main(m1,s) char *s; {
    int a,b,c,d,o[k],n=(int)s;
    if(m1==1){ char b[2*j+f-g]; main(l(h+e)+h+e,b); printf(b); }
    else switch(m1==h){
        case f:
            a=(b=(c=(d=g)<<g)<<g)<<g;
            return(m(n,a|c)|m(n,b)|m(n,a|d)|m(n,c|d));
        case h:
            for(a=f;a<j;++a)if(tab1[a]&&!(tab1[a]%
((long)l(n))))return(a);
        case g:
            if(n<h)return(g);
            if(n<j){n-=g;c='D';o[f]=h;o[g]=f;}
            else{c='r'-'b';n-=j-g;o[f]=o[g]=g;}
            if((b=n)>=e)for(b=g<<g;b<n;++b)o[b]=o[b-h]+o[b-g]+c;
            return(o[b-g]%n+k-h);
        default:
            if(m1==e) main(m1-g+e+h,s+g); else *(s+g)=f;
            for(*s=a=f;a<e;) *s=(s<<e)|main(h+a++,(char *)m1);
    }
}
```

Prints "Hello World" to screen

```
#include <stdio.h>

```

# Low vs. high level languages

Low level (e.g C++)

```
#include <iostream>

int main()
{
    std::cout << "Hello, World.";
}
```

High level (e.g. Python, R)

```
print "hello world"
```

```
print("Hello World!")
```

# What's popular?

# How do you find help when coding?

## Point-by-point help

- STACKOVERFLOW is a very useful tool
- Paste exact error/warning message into Google

## Resources (R)

- <http://tryr.codeschool.com/>
- <https://www.datacamp.com/courses/free-introduction-to-r>
- <https://www.r-bloggers.com/how-to-learn-r-2/>

## Resources (Python)

- <https://github.com/mattharrison/Tiny-Python-3.6-Notebook/blob/master/python.rst>
- [https://hub.mybinder.org/user/alfaromurillo-sir\\_models\\_intro-i5acnjcw/notebooks/SIR\\_models.ipynb](https://hub.mybinder.org/user/alfaromurillo-sir_models_intro-i5acnjcw/notebooks/SIR_models.ipynb)
- (LEARN X in Y MINUTES) <https://learnxinyminutes.com/docs/python3/>

# How do you tell people about your code and work with others?

## Sharing Code:

GitHub

GitLab

ATLASSIAN

Bitbucket

'Push' your code & 'pull' other people's code

## Best practices:

### 1. Make sure your code is correct

- Test every tiny addition is doing the right thing before writing more
- Update and fix bugs using 'version control' (e.g. git) which is very handy for ASCII files
  - For how to use 'git' lots of online resources incl. [try.github.io/](https://try.github.io/)

### 2. Make your code readable

-*Comment* everything

e.g. `CFR_bias = @(c) cumul_deaths_R(c) / cumul_inf_R(c) # function to calculate biased CFR for a given country`

-Give variables *sensible* names

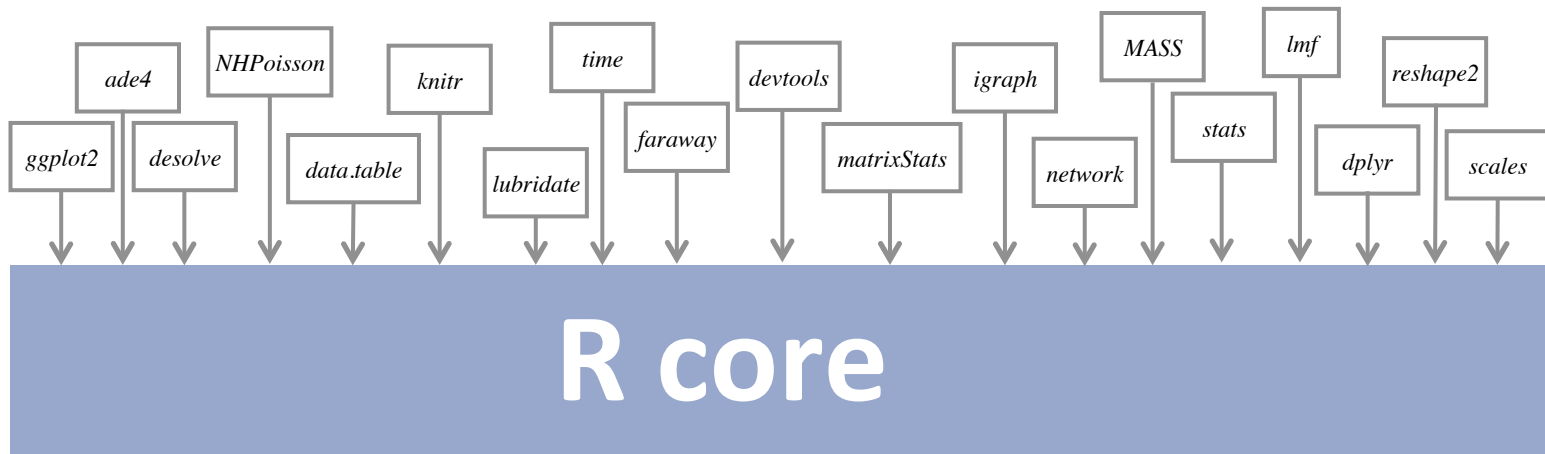

e.g. `IncidenceRate <- mydata[, 2]` is better than `A <- mydata[, 2]`

**#2 programming rule: Write code for two people (you now and you in a year)**

# What is R?

- Programming language
  - Free, open source core, maintained and regularly updated
  - Statistics and data-focussed
  - Add-on packages made by users

# Why use R?

- Free
- Active development
- No limit on what you can do:
  - Statistics
  - Data cleaning/processing
  - Interacting with websites
  - ...
